DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17 and 20, drawn to a method of detecting the presence of anti-MHC antibodies in a sample and a method of detecting the presence of anti-HLA antibodies in a sample and a kit, classified in class 435 subclass 7.1.
 - II. Claim 18, drawn to a single solid support, classified in class 436, subclass 518.
 - III. Claims 19 and 21, drawn to a method of depleting a sample of MHC molecule antibodies, classified in class 435, subclass 6.
2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed in invention II can be used in a materially different process of using that product such as the process of claim 19.
3. Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially

Art Unit: 1641

different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed in invention II can be used in a materially different process of using that product such as the process of claim 1.

4. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, invention I is a method of detecting the presence of anti-MHC antibodies in a sample and detecting the presence of anti-HLA antibodies in a sample whereas, invention III is a method of depleting a sample of MHC molecule antibodies and also involves removing at least the recombinant MHC molecules to which antibodies contained within the sample have bound.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for one group is not required for other restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1641

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
